VERSUS ALL**

Breakdowns of how Ivy League production of VC-backed founders stacks up against the general population.

Introduction

This publication traces its origins back to a blog post on the top university programs producing entrepreneurs, composed in the middle of college football season in October 2013. That post ranked the top universities by the number of alumni who founded companies that received a round of venture funding. From such humble origins has evolved a full-fledged PitchBook report, even if the core methodology has changed but little—the timeline of the data goes back to 2006 in this edition, as opposed to 2010, except in the case of the exits section. This edition marks the fourth official installment of PitchBook’s unique presentation of entrepreneur production by university program, and as such, it’s been an intriguing exercise each year to augment or change which datasets are included in order to ensure the report is fresh and thought-provoking. Once again, we are confident that the installment you are reading as the 2016-2017 school year kicks off meets those criteria.

First off, the scope of the datasets examined have grown significantly. We used to include select articles of interest from PitchBook News & Analysis in this report, but we simply don’t have space anymore, since we had enough universities data to fill a full-sized report.

Second, we have added brand-new slices of the vast original datasets on entrepreneurs’ programs. From comparing Ivy League program graduates’ production of companies to those of the general entrepreneur population, to summarizing serial entrepreneurs by program, to breaking down companies started by sector and university program, this report is the largest yet of the Universities series. So without further ado, let’s dive in—as always, if you have any questions about the methodology behind this publication or any other related inquiries, please feel free to reach out to us at reports@pitchbook.com.

Methodology: We tracked founders of companies that received a first round of venture funding between January 1, 2006 and August 15, 2016. All rankings—except those of unicorns, which have no specific date criteria—are based on data solely within that timeframe, apart from the exits section, wherein the exit has to have occurred between January 1, 2010 and August 15, 2016.

PitchBook

TOP UNIVERSITIES

For VC-backed entrepreneurs

In last year's edition of this report, we noted that in an era of depersonalized communication, personal connections come at a premium. Even in the relatively brief span of time since then, that observation rings more true than ever. Given the broader context of what has occurred in the venture capital landscape across the ensuing months, how much people within the venture industry rely on their personal networks is fascinating to analyze. As caution remains high in light of the tremors in financial markets and general unease at the relative health of the global economy, will investors remain firmly fixed on playing it safe within the geographical realms they know? Will Sand Hill Road VCs hone their focus even more upon the Bay Area? It's a bit of a tenuous chain, but it arguably follows that in times like these, people rely on their most trusted connections, those whom they've known for the longest and with whom they share the deepest bonds. Such a trend could be evidenced by an increased concentration of VC-backed startup production at the universities that are already dominators in their categories—a winner-take-all phenomenon, in other words. Those winners—in terms of entrepreneur production, of course—

TOP 50 UNDERGRADUATE

Rank	University	Entrepreneur count	Company count	Capital raised (\$M)
1	 Stanford University	1,006	850	\$18,146
2	 University of California (UC), Berkeley	997	881	\$14,239
3	 Massachusetts Institute of Technology (MIT)	813	695	\$12,874
4	 Harvard University	762	673	\$17,204
5	 University of Pennsylvania	724	648	\$9,475
6	 Cornell University	635	585	\$10,777
7	 University of Michigan	607	546	\$7,767
8	 University of Texas	561	511	\$4,763
9	 Tel Aviv University	515	429	\$5,101
10	 University of Illinois	451	415	\$5,462

DATA: PITCHBOOK

already benefit from geographic proximity to major sources of capital, well-regarded business schools, deeply rooted monoliths in certain industries, etc. Such incumbent advantages are hard to beat, which is one reason why there has been precisely no fluctuation in the ranking of the top 10 university undergraduate programs between this year's installment and the last, although the actual figures have varied considerably. Last year, we

noted that founders from the top 10 undergrad programs created over 3,000 companies and raked in \$33.5 billion in VC. Those same figures have been revised upward to 6,000+ and \$105.8 billion. Is that testament to the ongoing "unicorn" phenomenon, not to mention overall boom in late-stage VC financing observed in the past year? Yes, but it also is a product of increasingly expansive PitchBook coverage.

DATA: PITCHBOOK

» UNIVERSITIES from pg. 4

(A static database that does not undergo continuous tinkering in order to improve is about as useful as sticking with Windows 95—it may perform basic functions well, but it is nevertheless increasingly irrelevant.) But that increase in size also underlines just how attractive private markets have become—again, especially given the global investment landscape. Entrepreneurship has rarely been so highly touted as a career choice; asset managers worldwide desperately seek exposure to any potential sources of high growth, even if quite risky; governments across the globe explore different methods of jumpstarting domestic jobs growth via entrepreneur and innovation-friendly legislation; and the consequent combination begets a surge in the counts of entrepreneurs, companies and capital raised.

The success of such endeavors remains to be seen, by and large. Those trends will continue, albeit in varying degrees of strength as the global economy waxes and wanes in relative health and certain variables, such as political shifts, are resolved. In response, the rates of production of startups receiving venture funding will fluctuate significantly across our global rankings, at least in the middle to bottom. Actually, that is a fitting note on which to conclude this preamble: It's perhaps most interesting to compare these most recent numbers with the past few editions, especially the expanded rankings, so we highly encourage you to dig up past copies, available at pitchbook.com/news/reports, to complement your analysis.

IVY LEAGUE VERSUS NON-IVY LEAGUE, UNDERGRAD

Company count

Capital raised (\$B)

IVY LEAGUE VERSUS NON-IVY LEAGUE, MBA

Company count

Capital raised (\$B)

Methodology: Our definition of serial founder is an entrepreneur who founded two or more separate companies that garnered a first round of venture financing within the timeframe specified earlier—January 1, 2006 to August 15, 2016. In the tables below, you'll note that some capital raised amounts are blank. That is because the round amount is unknown at this point in time.

TOP 15 UNDERGRADUATE

Rank	University	Entrepreneur count	Company count	Capital raised (\$B)
1	 UC Berkeley	157	153	\$4.2
2	 Stanford University	135	129	\$2.6
3	 MIT	124	120	\$4.1
4	 Harvard University	103	99	\$3.6
5	 University of Pennsylvania	102	99	\$1.6
6 (T)	 Yale University	87	81	\$2.0
6 (T)	 Cornell University	87	87	\$2.5
